

‘The Phoenix Point’

The quest for the science of the paranormal

By Geoffrey Crockford and Nigel Hughes

Book Launch 19th April 2011

Chenies Manor House, Chenies, Bucks

Attendance by invitation only (so that we know how many coffees and seats to provide)

For an invitation contact Geoffrey Crockford by email gcbiolocation@bopenworld.com or by mail: The Orchard, Church Lane, Bovington, Herts HP3 OHS.

The launch will include short updating statements, the taking of questions and discussions on the topics covered in the book.

These are:

- The discovery of what the dowsing phenomena is. It is no longer part of the paranormal.
- The magnetic sensory system.
- Toxic magnetic fields.
- The development of a powerful investigative technique – biolocation.
- The physics of the dia and paramagnetic fields, faster than light communication.
- The para and diamagnetic fields of the Earth and Sun.
- The application of field forensics and crime scene investigation to archaeology.
- Quantum entangled magnetic fields.
- Life in the solar system and on planets round stars.
- Extra terrestrial life and PILF evolution.
- The future and level 2 technology.
- Books in preparation.

After the updating and questions there will be a period for general discussion and the demonstration of equipment used to study magnetic fields. There will be an opportunity to discover your own Goldilocks planet and see edge diffractometers in action. It is hoped that part of a Druidic temple will be marked out for the archaeologists and there will be a model of an energy engineered stone circle.
